Inventory Tracking Software System

This Visual dBase for Windows application allows the customer to track inventory from order placement to product shipments. The full relational database gives users control and flexibility of vendor, customer and inventory tracking information. Utilizing bar code technology, **ITSS** gives you the tools needed to satisfy the data requirements that meet your customers demands.

Features:

♦ **Customer/ Vendor Maintenance**
⇒ Screens are designed to be the same for easy training and quick use.
⇒ View current Purchase Order Status
⇒ Utilize the remarks screen for special notation

♦ **Product Maintenance**
⇒ Add products quickly with 2 ID fields, description, pricing, packaging information.
⇒ Quick Product Add feature.
⇒ Multiple Vendor Resource – Identify different sources for your Product Purchases

♦ **Purchase Order / Work Order Entry**
⇒ Screens are similar for easy training and quick use.
⇒ Generate PO's from re-order level information

♦ **PDT Interfaces**
⇒ SDD – Seamless Data Download of data from portable data terminals.
⇒ 3 Pre loaded portable data collection applications – Shipping, Receiving and Product
⇒ Movement plus a Physical Inventory application for end of year inventory.

♦ **Print Bar Codes**
⇒ Label your product as you receive it in the warehouse

ITSS ease of use allows for easy training of personnel, quick utilization of product identification and data entry to maintain a tighter control on inventory. Respond quickly to the changing needs and requirements of customers. Track trends though reorder levels and quick product purchasing. Manage all warehouses in your operation and know where you can fulfill your orders quickly, accurately and with confidence.

Inventory Tracking Software System/Point Of Sale

The Point Of Sale, or POS portion of ITSS/POS is interfaced to the ITSS inventory program. Each POS transaction seamlessly updates the inventory levels of ITSS, which guarantees accurate inventory level reporting.

Features:

- **Register Functions**

⇒ **Cash Out**, is a current reporting of all transactions and the total dollar value of each transaction. The reporting also indicates the method of payment used for each transaction, i.e. cash, check or charge. This feature is also used to verify cash drawer balance against daily totals to ensure accuracy in accounting.

⇒ **Post and Clear** is used to Post all transactions to date and Clear previous his tory. This can be used at the end of each business day or at employee change.

⇒ **Product Look Up**, allows you to search the product database by SKU, UPC and product description.

⇒ **Quick Count,** gives you an update of the number of sales transactions and the total dollar amount for those transactions since the last Post and Clear.

- **Administration:**

Register Set Up, This area is used to set up company defaults, password security and receipt messages. ITSS/POS gives you the added advantage of using the customer receipt as an advertising tool, or to offer discounts or state return policy.

Requirements:

Operating System: Windows 7

Supporting Hardware

ScanLink can also provide you with networkable PC based registers that include barcode scanners, receipt printers and space saver platforms.
